

Whereas the need for morse proficiency is no longer required for safe non-interfering communication and whereas the ITU has dropped the requirement for member countries to require morse testing for HF licensing and whereas the IARU has encouraged the dropping of morse testing, I wholeheartedly urge the FCC to adopt this proposal.

Morse code is a mode of operation like sstv, psk, or phone. As these modes don't require testing to receive HF licensing, why should morse be tested??? This will encourage people to get their license, as the morse test has served as a high hurdle for many people. Please adopt this proposal.
